UNKOV

AI-Native Identity Orchestrator

Business Plan | Seed Round: $4.0M | Confidential | March 2026

Founder: Mustafa Albassam | info@unkov.com | unkov.com

1. Executive Summary

Unkov is an AI-native Identity Orchestrator purpose-built for the agentic enterprise. While legacy IAM tools function as static filing cabinets, Unkov maps the living "Social Fabric" of a business — connecting humans, bots, and resources in a real-time Relationship Graph powered by Amazon Neptune.

The platform eliminates 90% of manual IT access review labor and transitions organizations from request-based to intent-based access management. In 2026, AI agents outnumber human employees by 144:1. Legacy tools are structurally incapable of governing this reality. Unkov is the only platform built from the ground up for it.

Critically, Unkov does not just detect risk — it owns the identity layer of the agentic workforce. Four structural moats create integration and data gravity that legacy vendors and new startups cannot replicate: (1) the Permission Gate, where every agent must request a Micro-Token before acting; (2) the Bot Reputation Network, an anonymous cross-tenant threat intelligence engine; (3) Hardware-Level Identity, rooting agent identity in TPM or EC2 instance fingerprint; and (4) Compliance Gravity, making Unkov the System of Record for SEC and HHS auditors. These moats compound with every new customer.

The Ask: $4.0M Seed Round via Post-Money SAFE at a $20.0M post-money valuation. Deployed over 24 months to build a lean engineering team, scale infrastructure, and execute a focused go-to-market in BFSI and Healthcare. Target: $500K ARR and 15–20 enterprise customers — Series A ready in 2027.

2. Company Description

Unkov is a Delaware C-Corporation founded to address a structural gap: the complete absence of a governance platform capable of managing human and non-human identities at the speed demanded by AI-native organizations.

Mission: Transform enterprise identity from a manual, reactive burden into an autonomous, self-healing system — turning the most exploited attack surface in cybersecurity into a strategic competitive advantage.

Vision: Become the foundational operating system for enterprise governance, where every identity is observed, analyzed, and self-healed without human intervention.

CORE VALUES	
Innovation	We push the boundaries of AI and graph technology to solve problems that legacy tools cannot address.
Customer Obsession	Every product decision is anchored in the real operational pain of security and IT leaders.
Integrity	Our AI is fully explainable and auditable — never a black box. Every automated action is logged.
Resilience	We build systems that harden over time, becoming more intelligent with every identity interaction.

Current Stage: Pre-revenue seed stage with a working prototype. The Relationship Graph engine and Zero-Touch Observation Mode are functional and validated in pilot environments — producing the Identity Drift dashboard within 30 minutes of deployment.

3. Management Team

Seed-stage investors invest in the team, not just the idea. Each team member bio should include 3–5 sentences and 2–3 specific, quantifiable accomplishments (e.g., "Led engineering team that scaled platform to 10M users").

RECOMMENDED ROLES TO HIGHLIGHT	
CEO / Founder	Vision, fundraising, and go-to-market leadership. Identity security domain expertise.
CTO / Co-Founder	Graph database architecture, AI/ML engineering, and AWS Neptune infrastructure.
CRO / VP Sales	Enterprise SaaS sales experience in cybersecurity or IAM. Proven $1M+ deal track record.

Head of Product	Identity security domain expertise and product roadmap ownership.
Advisors	Former CISOs, AWS principals, or IAM industry veterans with relevant exits or investor networks.

4. Problem Statement

4.1 The Operational Crisis: The Manual Review Tax

Modern enterprises face a compounding operational crisis: the growth of digital identities has structurally outpaced the ability of human IT teams to govern them. Legacy systems like SailPoint and Okta provide identity lists — not identity intelligence. IT teams are forced into manual, spreadsheet-assisted reviews that consume three full work weeks per quarter and produce error-prone, over-provisioned access that creates the very risks they are meant to prevent.

THE NUMBERS	
120+ hrs/qtr	Manual labor spent on access reviews — three full work weeks per enterprise IT team
3–5 days	New hire onboarding delay caused by manual approval chains; managers over-provision to compensate
40%	Access requests approved without proper verification due to process fatigue
1,062 apps	Average SaaS footprint managed by IT teams without automated intelligence

4.2 The Security Crisis: Ghost Access and the NHI Explosion

Legacy IAM is built on static, relational databases that cannot model the complex, dynamic connections of a modern business. The Non-Human Identity (NHI) explosion has made this architectural limitation critical:

- Orphaned Identities: When employees leave, accounts frequently remain active as persistent backdoors. 12+ active ex-employee accounts are common in a representative enterprise environment.
- The NHI Explosion: Bots and AI agents now outnumber humans 144:1. Service accounts with Admin access unused for 90+ days are prime ransomware targets — yet most are entirely unmonitored.

- Identity Drift: Over time, users accumulate permissions they no longer need, creating Toxic Combinations where a single identity can commit fraud by both creating and approving financial transactions.
- The Intelligence Gap: Legacy tools tell you who a user is — they cannot predict what access a user actually needs, or detect when a bot has gone rogue. They are filing cabinets, not intelligence engines.

5. Solution: Discover → Analyze → Remediate → Monitor

Unkov solves the Identity Intelligence gap through four integrated capabilities forming a continuous, autonomous governance loop. From first credential handoff to live dashboard: under 30 minutes.

THE FOUR PHASES	
DISCOVER	Zero-touch AWS IAM + Okta scan. Identity Graph built in Neo4j. Permission Gate registers every service account. Hardware Identity binds agents to EC2 fingerprint. Live dashboard in < 30 minutes.
ANALYZE	GPU-accelerated ML drift scoring (PyTorch/T4). Peer-Clone detection flags over-provisioned identities. Anomaly detector finds outliers vs peer groups. Bot Reputation Network syncs cross-tenant threat intelligence.
REMEDIATE	Kill-Switch revokes access keys and admin policies instantly. Orphan Purge deactivates inactive accounts. Rightsizing Engine replaces Admin with minimum-privilege policies. Patient Data Lineage writes every action to immutable audit trail.
MONITOR	Celery workers rescan every 6 hours. Continuous PCI DSS, HIPAA, SOC 2 evidence collection. Pilot Success Metrics track conversion readiness. All four structural moats fully active.

6. Competitive Moats — Four Unbreakable Advantages

The strongest moat in 2026 is not a feature. It is integration and data gravity. These four structural moats are architecturally impossible for legacy vendors to replicate and compound in value with every new customer.

MOAT 1 PERMISSION GATE — *Action-Interference Lock-In*

Most competitors are sidecar tools — they watch and send alerts. Unkov is the Green Light. Every AI agent must request a Micro-Token before it can move money in Fintech or access a patient record in Healthcare. Token is time-limited, action-scoped, and revocable. Once embedded in automated workflows, removing Unkov means the entire AI workforce stops operating. This is a stronger lock-in than any data integration or workflow dependency in enterprise software.

"They can't delete Unkov without shutting down their entire agentic operations."

MOAT 2 BOT REPUTATION NETWORK — *Cross-Sector Network Effect*

Unkov creates an anonymous Bot Reputation Score across every customer. If a specific AI agent type acts toxically in a London Fintech firm, Unkov's Intent Engine automatically throttles that same agent type for a New York hospital — before it strikes. A new startup cannot replicate this because they don't have data from hundreds of companies. The more customers Unkov has, the safer every individual customer becomes. This is a true compounding network effect: impossible to buy, impossible to copy, impossible to reverse.

"Our moat compounds with every customer. A startup with one customer can never compete with a network of thousands."

MOAT 3 HARDWARE-LEVEL IDENTITY — *12–18 Month Technical Lead*

Competitors like Okta stop at the software layer. Unkov roots AI agent identity in the TPM (Trusted Platform Module) or Secure Enclave of the server the agent runs on — creating a Physical Identity for digital bots. On AWS EC2, this uses the cryptographically signed instance identity document (signed by AWS, unforgeable). This prevents Agent Cloning and Sleeper Agent attacks that software-only tools miss entirely. No named competitor has announced this capability. This lead must be filed as prior art immediately.

"We are the only platform that gives AI agents a physical identity. Software-only tools are blind to hardware-level spoofing."

MOAT 4 COMPLIANCE GRAVITY — *System-of-Record Lock-In*

Unkov becomes the official System of Record for auditors. When the SEC asks a Fintech firm or HHS asks a Healthcare system for proof of AI governance, the customer hits Export from Unkov. CFOs and Legal teams hate switching compliance tools. If Unkov is the reason they passed their 2026 HIPAA or PCI DSS 4.0 audit, they will never allow IT to cancel the subscription. This converts security spend into a protected compliance budget line that survives any cost-cutting cycle.

"CFOs don't cancel the tool that made them pass their audit. Compliance gravity is the strongest lock-in in enterprise SaaS."

Healthcare Vertical: Patient Data Lineage

In Healthcare, Unkov's deepest vertical moat is Patient Data Lineage. The average Healthcare breach costs $7.42M — highest of any vertical. Hospital CISOs currently cannot answer: "Which AI agent touched our ePHI today, and should it have?" Unkov answers that question in real time.

- Prove which agent accessed which patient record — down to the individual field
- Timestamp and justify every ePHI access event with full audit trail
- One-click HHS export answering any HIPAA § 164.312(a) audit question instantly
- Eliminate manual audit scrambles that currently take weeks of staff time
- Automatic orphan purge when clinical staff depart — within hours, not months

7. Competitive Landscape

7.1 Direct Competitors

Unkov sits in a distinct category: AI-native, graph-native, with structural moats no competitor has matched. The competitive matrix below shows where each named competitor falls short.

COMPETITOR	THEIR MOAT	UNKOV'S SUPERIOR MOAT
Okta	Human Identity SSO	Agent-to-Agent Social Fabric + Hardware-Rooted Identity + Bot Reputation Network
Entro / Astrix	NHI Discovery + Alerts	Intent Engine prediction + Autonomous Kill-Switch + Permission Gate lock-in
Vanta / Drata	Static Compliance Checklists	Autonomous remediation + System of Record (SEC/HHS one-click export)
Torq / Gomboc	Reactive SOC Remediation	Predictive prevention via Intent Engine + Permission Gate lock-in

Strata.io	Identity Orchestration	Graph-native depth + Bot Reputation Network + Hardware Identity
New AI Guardrails	Prompt Injection Detection	Full identity lifecycle + Agent governance + Compliance Gravity

7.2 Feature Comparison

Feature	Unkov	Okta	SailPoint	CyberArk
Architecture	Graph-Native (Neptune)	Relational	Relational	Relational
Identity Scope	Unified Human + NHI	Human-Centric	Human-Centric	Privileged Only
Core Philosophy	Autonomous Remediation	Manual Provisioning	Manual Review	Vault-Based Control
Deployment Time	< 30 Minutes	Weeks	Months	Months
AI Capability	Predictive + Graph-Native	Bolt-on / Limited	Bolt-on / Limited	Bolt-on / Limited
Permission Gate	✓ Native (Moat 1)	✗	✗	✗
Hardware Identity	✓ Native (Moat 3)	✗	✗	✗
NHI Governance	Native, First-Class	Afterthought	Afterthought	Partial

8. Market Analysis

8.1 Market Size

MARKET OPPORTUNITY	
IGA Market (2026)	$10.7 Billion — driven by regulatory mandates and the NHI explosion
ITDR Market (2026)	$19.66 Billion — driven by the shift to behavior-based anomaly detection
Combined TAM	$30+ Billion — accelerated by AI agent proliferation and escalating breach costs
SAM	$500M–$1B — mid-market and enterprise in the United States and Western Europe

SOM (Years 1–3)	$8–12M — BFSI and Healthcare verticals within the mid-market

8.2 Key Market Trends

- The Agentic Shift: 95% of Fortune 500 enterprises now run autonomous AI agents. Bots outnumber humans 144:1. Manual governance is structurally impossible.
- Escalating Breach Costs: Average U.S. data breach costs $10.22M. Organizations using AI-driven security automation save an average of $1.9M per incident and identify breaches 80 days faster.
- Regulatory Pressure: PCI DSS 4.0, HIPAA, and SOC 2 mandates create compliance-driven purchasing urgency, particularly in Healthcare and BFSI. Automated evidence collection is now a procurement requirement, not a differentiator.

8.3 Target Customer Segments

CUSTOMER SEGMENTS	
Mid-Market Accelerator (Primary)	500–19,000 employees. Manages 1,062+ apps without adequate governance. Needs sub-30-minute deployment and no professional services overhead.
Agent-Heavy Enterprise	Large BFSI and Technology firms where NHI accounts exceed human identities. Highest exposure to agentic toxic combinations.
Regulated High-Risk Sectors	Healthcare ($7.42M avg breach), Fintech (OWASP Agentic Top 10), Retail (PCI DSS 4.0 mandates). Compliance-driven buying cycles.

9. Products and Services

Unkov is delivered as a cloud-native, multi-tenant SaaS platform. No on-premises hardware required. The platform operates as a continuous, autonomous governance loop across four modules.

PLATFORM MODULES	
Identity Social Fabric (Discover)	Zero-touch scanner builds a real-time Relationship Graph of all human and non-human identities. Continuously updated — always reflects live state of the enterprise.
Intent Engine (Analyze)	ML applied to the graph: (a) Peer-Clone provisioning predicts access needs from behavioral patterns of functional peers; (b) Identity

	Heartbeat monitoring scores every permission for relevance based on actual usage.
Autonomous Remediation (Remediate)	Converts Intent Engine findings into automated actions: low-touch rightsizing recommendations through high-urgency Kill-Switch revocations. Permission Gate enforces action-level token requirements.
Compliance Monitor (Monitor)	Continuous PCI DSS, HIPAA, SOC 2 evidence collection. Pilot Success Metrics track conversion readiness. All four structural moats fully active with real-time dashboards.

Roadmap — Year 2–3

- Compliance Autopilot: automated SOC 2, HIPAA, and PCI DSS evidence packages generated on demand
- Cross-Tenant Threat Intelligence feed: anonymized behavioral anomalies aggregated across the customer base
- Native mobile app: real-time alerts and one-touch access approvals for managers

10. Marketing and Sales Strategy

10.1 Go-to-Market Approach

Direct Sales + Channel Partner GTM. Year 1 targets CISOs and CIOs at BFSI and Healthcare firms with 1,000–19,000 employees. Year 2 expands to the broader mid-market.

GTM CHANNELS	
Direct Enterprise	High-touch consultative sales. Zero-Touch Pilot deploys a live Identity Drift dashboard in 30 minutes — creating a visceral proof of value that closes faster than any slide deck.
MSP Channel	White-label Unkov for Managed Service Providers. Multi-tenant dashboard. 20% partner margin. Access to mid-market at lower CAC than direct.
AWS Marketplace	Simplifies procurement using existing cloud budgets. Organic discovery from AWS enterprise customer base. Co-sell opportunities with AWS field teams.
Identity Audit Tool	Free, no-commitment Discovery Engine snapshot. Creates high-intent pipeline of organizations that have already seen their own

	problem quantified.

10.2 Sales Funnel

Stage	Activity	Target Conversion
Awareness	Content, conferences, Identity Audit freemium tool	—
Interest	Demo request / Audit tool activation	5% of leads
Evaluation	30-minute Zero-Touch Pilot deployment	40% of demos
Decision	Proposal and contract negotiation	30% of pilots
Retention	Quarterly business reviews, expansion	< 10% annual churn

11. Business Model

Hybrid SaaS: fixed annual Platform Fee plus usage-based Node Pricing scaled by active Identity Nodes (human + non-human identities under management). Revenue grows proportionally with each new agent a customer deploys — no new sales cycle required.

INDICATIVE PRICING	
Mid-Market Starter	Up to 2,500 Identity Nodes — ~$25,000 ACV
Mid-Market Growth	2,500–10,000 Identity Nodes — ~$60,000 ACV
Enterprise	10,000+ Identity Nodes — $150,000+ ACV

UNIT ECONOMICS (TARGET STATE)	
Average Contract Value	$40,000 (Year 5 target, growing from $20,000 in Year 1)
Customer Acquisition Cost	< $15,000
LTV:CAC Ratio	> 5:1
Gross Margin	75–80% at scale

Net Revenue Retention	> 115% — expansion driven by identity node growth

12. Operations Plan

Infrastructure

Fully hosted on AWS. Amazon Neptune for the Identity Relationship Graph — sub-second relationship queries at enterprise scale. Multi-tenant SaaS with tenant-level data isolation. No on-premises hardware.

Security and Compliance

SOC 2 Type II certification pursued within 12 months of seed close. All data encrypted in transit and at rest. AI decision engine fully explainable and auditable — complete log of every automated action. Unkov holds itself to the highest operational security standards as a security product.

Team Structure (Post-Seed)

TEAM ALLOCATION	
2 × Senior AI/ML Engineers	Graph inference engine, PyTorch drift scorer, peer-clone model
1 × Senior Backend Engineer	AWS infrastructure, connectors, API layer
1 × Product Engineer	Dashboard, reporting layer, frontend
1 × Customer Success Engineer	Onboarding, integration support, pilot success metrics

13. Financial Projections

13.1 Revenue and Customer Growth

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Paying Customers	5	15	40	80	150
Avg Contract Value	$20,000	$25,000	$30,000	$35,000	$40,000

Annual Revenue	$100,000	$375,000	$1,200,000	$2,800,000	$6,000,000

13.2 Five-Year Income Statement

Line Item	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	$100,000	$375,000	$1,200,000	$2,800,000	$6,000,000
Cost of Goods Sold (20%)	$20,000	$75,000	$240,000	$560,000	$1,200,000
Gross Profit	$80,000	$300,000	$960,000	$2,240,000	$4,800,000
Salaries & Benefits	$825,000	$825,000	$825,000	$825,000	$825,000
Sales & Marketing	$200,000	$200,000	$200,000	$200,000	$200,000
R&D	$410,000	$410,000	$410,000	$410,000	$410,000
G&A	$100,000	$100,000	$100,000	$100,000	$100,000
Total OpEx	$1,535,000	$1,535,000	$1,535,000	$1,535,000	$1,535,000
Operating Income	($1,455,000)	($1,235,000)	($575,000)	$705,000	$3,265,000

Break-even is projected in Year 4 at approximately 80 customers. The $4M seed raise provides approximately 32 months of runway — well beyond the 18–24 month window required to reach Series A milestones. Operating expenses are held constant through Year 5 to model a lean, high-density team. In practice, headcount scales with revenue in Years 3–5.

14. Funding Request and Use of Funds

THE ASK	
Round Type	Seed Post-Money SAFE (81% of SAFEs on Carta in 2026 use this structure)
Target Raise	$4,000,000
Pre-Money Valuation	$16,000,000
Post-Money Valuation	$20,000,000
Equity Dilution	~20% — standard seed dilution for this valuation and raise size

Projected Cash Runway	32 months from close

USE OF FUNDS — 24 MONTHS	
Talent (70%)	$2,800,000 — 5 AI/ML and data engineers at $180K fully loaded cost
Infrastructure (20%)	$800,000 — AWS Neptune, real-time inference compute ($25K–$33K/month)
Go-to-Market (10%)	$400,000 — high-intent lead generation for BFSI and Healthcare verticals

15. Pilot Success Framework — No Pilot Purgatory

Before every pilot begins, success metrics are agreed in writing. If met, the customer moves to a paid contract. This eliminates open-ended evaluations that test forever without buying.

PILOT SUCCESS METRICS	
Orphaned Accounts Discovered	If Unkov identifies X+ orphaned identities within 30 days → customer signs
Unauthorized Actions Prevented	If Unkov blocks Y+ unauthorized agent actions → customer signs
Compliance Evidence Generated	If Unkov produces audit-ready HIPAA/PCI evidence within the pilot period → customer signs
Time to First Dashboard	< 30 minutes from credential handoff to live Identity Drift score. Non-negotiable.
Pilot Fee Structure	Credited in full toward Year 1 ACV. The pilot is an advance payment on the contract — not a cost.

16. Milestones and Roadmap

16.1 Seed Phase — Months 1–24

MILESTONE	TIMELINE	SUCCESS METRIC
Team build-out complete	Month 3	5 engineers hired and productive
SOC 2 Type II initiated	Month 4	Audit process started
First 3 paying customers	Month 6	Signed contracts, live deployments
AWS Marketplace live	Month 8	Active listing, first inbound leads
10 paying customers	Month 12	$200K+ ARR
First MSP channel partner	Month 14	Active reseller agreement signed
SOC 2 Type II achieved	Month 16	Clean audit report in hand
Series A readiness	Month 24	$500K ARR, 15–20 customers, <10% churn

16.2 Series A Milestones (Target: Q1 2027)

- ARR: $300K–$500K in annual recurring revenue
- Customers: 15–20 paying enterprise customers with annual churn below 10%
- Validation: Proven 80-day reduction in breach detection time across all deployments
- NRR: Net Revenue Retention above 110%, demonstrating expansion within the existing base
- Pipeline: $1M+ in qualified ARR pipeline to support Series A growth projections

17. Exit Strategy

Primary exit: strategic acquisition. The identity security market has a strong history of M&A at significant multiples. Unkov's graph-native architecture and NHI governance capabilities represent a differentiated, acquirable asset.

ACQUISITION TARGETS	
Tier 1 — Cloud Providers	AWS (deep Neptune integration is a natural fit), Microsoft Azure, Google Cloud — all actively building security portfolios
Tier 2 — Cybersecurity Platforms	Palo Alto Networks, CrowdStrike, Zscaler — building comprehensive platforms, proven appetite for best-in-class acquisitions

Tier 3 — Enterprise Software	ServiceNow, Salesforce — significant investments in identity and governance workflows; Unkov's automation aligns directly with their strategies
Secondary Path — IPO	At $20M+ ARR with strong NRR and a defensible market position, an IPO is a viable long-term path

18. Investor Data Room & Due Diligence

18.1 Financial & Capitalization Proof

- Detailed 3-year dynamic financial model (Excel/Google Sheets) — formulas and assumptions testable
- Cap table: clean ledger detailing ownership across founders and prior SAFE holders, including 15% ESOP reserved
- Itemized use of funds: 70% R&D/Engineering, 20% Infrastructure, 10% GTM

18.2 Technical & AI Defensibility

- 12–18 month product roadmap synchronized with financial burn rate
- System architecture diagram: Amazon Neptune Identity Graph and proprietary data ingestion stack
- Data provenance and rights documentation — critical 2026 AI due diligence requirement
- Prior art filing plan for Hardware-Level Identity moat (Moat 3)

18.3 Legal & Corporate Hygiene

- Delaware C-Corp Articles of Incorporation, bylaws, and certificates of good standing
- IP assignment agreements executed from all founders, employees, and contractors
- Executed LOIs and anonymized case studies from BFSI and Healthcare pilots
